Negative aspects related to the course:

-

Positive aspects related to the course:

The possibility to listen to it as many times as necessary.

Negative aspects related to the laboratory works and to the laboratory guide (documentation):

It is not fair to do 2 laboratories in the time allocated for one and then grade them separately, especially because it was the teacher who put the class in this situation. Lack of patience with respect to questions. A way to low tolerance to mistakes. The guide has mistakes.

Positive aspects related to the laboratory works and to the laboratory guide (documentation):

Despite the mistakes in the guide, it is pretty well organised.

Negative aspects related to the teacher of the course:

-

Positive aspects related to the teacher of the course:

Negative aspects related to the course:

the subject of the course is a bit niche, personally i do not think i will work with cnc machines

Positive aspects related to the course:

the material provided was plentyfull, we had all resources that we need: ppt and videos. Explanations were clear and easy to follow

Negative aspects related to the laboratory works and to the laboratory guide (documentation):

tasks were a bit hard and tricky, example: when we had to figure out that we must do an operation 2-3 times bc the tool size was small. Also in some labs there were a lot of computations to figure out the coordinates.

Positive aspects related to the laboratory works and to the laboratory guide (documentation):

very good examples, easy to understand

Negative aspects related to the teacher of the course:

none

Positive aspects related to the teacher of the course:

very funny, very kind to us, happy to help

Negative aspects related to the laboratory teacher:

none

Positive aspects related to the laboratory teacher:

same ('analog') to course

Proposals for improving the course activity:

studying 3D printers and solid works

Proposals for improving laboratory activity:

studying 3D printers and solid works
